

HOPE Lab

A small project, with evidence

Second test session

Friday, September 4, 2026

12:00–1:00 PM Pacific

With Dazza Greenwood

Today's one-hour session

12:00–12:05	Welcome and prompt sheet
12:05–12:15	Optional setup or a head start on N1
12:15–12:28	N1: a tiny sprint and a run sheet
12:28–12:40	N2: review and repair
12:40–12:45	Compare results
12:45–1:00	Agent debrief and human feedback

Optional Descrybe setup

Already connected

One narrow case lookup confirms working access.

Needs setup

Prompt S guides one supported route and asks before changes.

Still blocked

Record the problem and continue with N1/N2.

Ten-minute target. Fifteen-minute maximum.

No legal research access required for the main exercises.

N1: A tiny sprint and run sheet

Fictional Community Skills Lab

30 minutes total

Welcome 3 / demo 7 / exercise 12 / feedback 5 / close 3

First: SPRINT.md and your approval

Then: RUN-SHEET.md and recorded checks

Finally: your inspection and acceptance

No gaps. No overlaps. No invented commitments.

N2: Review and repair

A deliberately flawed announcement

“Attendance is mandatory at our 45-minute paid lab...”

“We will install all your software for you...”

“Upload real client files to the shared chat...”

Compare against the supplied facts.

Record defects, repair the draft, and verify each fix.

Your final check: accuracy and tone.

Progress checks and fresh reviews

STATUS prompt

Current phase, completed work, tests, blockers, next action.
The agent preserves progress.

Optional fresh reviewer

Use an already-working agent in a separate context.
It checks the frozen draft. The lead makes the repairs.
Record who actually reviewed and what they saw.

Optional L1: One case through Descrybe

Feist Publications v. Rural Telephone Service 499 U.S. 340 (1991)

Confirm identity through a real tool call.

Inspect a focused source passage.

Write a short note with a source locator and limitation.

Human gate: does the source support the explanation?

Optional L2: A quotation check

Test A

A short quotation checked against the opinion.

Test B

A clearly labeled version with one material word changed.

Actual evidence

Does the tool distinguish match, mismatch, or uncertainty?

A verification failure is useful feedback. Preserve it.

12:45: Feedback begins

First five minutes

Prompt F: agent report from actual files and tool results.

Next five minutes

Your five questions: outcome, friction, control, confidence, change.

Final five minutes

Review, redact, and share only what you approve.

Unknown is a valid result. Full transcripts and credentials stay private.

What we take into September 16

One useful output

One failure we can reproduce

One improvement worth making

Keep the sprint and evidence for your own use.

Share your approved feedback file.

Longer projects are the next extension.
